## Problem 2: Interference from thermally deformed surface (thermos-deformation)

## Part A [0.8 points]

The resulting pattern exhibits reversibility and shrinkage up to a certain power value. The upper boundary value corresponding to the thermo-elastic range which is known as yield strength should be determined.

| A.1 | Determine the power associated with this yield strength $\left(p_{\max }\right)$. | 0.3 pt |
| :--- | :--- | :--- |

## Experiment

mW
APhO
MONGOLIA 2023

Maximum optical path difference of rays is 2 h for central maximum.
For $\mathrm{m}^{\text {th }}$ fringe which is observed by visible angle $\alpha_{m}$, the optical path difference for the rays from the top and bottom of a bump is:

$$
\begin{gathered}
\Delta s_{m} \approx 2 h-O A=n \lambda-R \sin \alpha_{m}=n \lambda-m \lambda \\
R \sin \alpha_{m}=m \lambda \Rightarrow R=\frac{m \lambda}{\sin \alpha_{m}}
\end{gathered}
$$

Data obtained in Part C. 1 were used.

| $m^{\prime}$ | $R, \mathrm{~cm}$ | $L, \mathrm{~cm}$ | $\tan \alpha_{m}$ | $\sin \alpha_{m}$ |
| ---: | ---: | ---: | ---: | :---: |
| 1 | 1.0 | 49.2 | 0.0203 | 0.0203 |
| 2 | 1.3 |  | 0.0264 | 0.0264 |
| 3 | 1.5 |  | 0.0305 | 0.0305 |
| 4 | 1.8 |  | 0.0366 | 0.0366 |
| 5 | 2.1 |  | 0.0427 | 0.0426 |
| 6 | 2.3 |  | 0.0467 | 0.0467 |
| 7 | 2.6 |  | 0.0528 | 0.0528 |
| 8 | 3.0 |  | 0.0610 | 0.0609 |

| 12 | 4.5 |  | 0.0915 | 0.0911 |
| 13 | 5.0 |  | 0.1016 | 0.1011 |

Here, $m^{\prime}$ and $m$ are observed and real number of fringes, respectively.

## Experiment

mu ${ }_{\text {xxili }}^{6} \mathrm{Mm}$
APho
MONGOLIA 2023

$$
m^{\prime}=167.82 \cdot \sin \alpha_{m}-2.1722
$$

From the above equation, it shows that difference between $m^{\prime}$ and $m$ is $2.1722 \approx 2$ which is the number of fringes hidden in the central circle. From our data, $m=m^{\prime}+2=15$.

From the experiment, height of the bump is calculated to be $7.5 \lambda$ and the base radius is $R_{\text {base }} \approx$ 167.82 $\lambda$.
